Making good bikes perfect

Gas is on the right!

The LSL catalog has never been as thick as the new 2013 catalog you just opened. Every year, we spend a lot of time and dedication rebuilding our catalog, 108 pages this time. In this edition you will find the most comprehensive presentation yet of the diverse LSL product range.

The presentation of the products has been revised and tables show the various product groups, detailed by color. A large summary table showcases accessories such as handlebar controls and replacement foot pegs, listed systematically and model-based.

The editorial pages have been given some attention as well. A detailed article tells the exciting story of a tour through the Pyrenees. And a separate section is devoted to the passionate production of Clubman motorcycles.

Take some time to browse through this catalogue and let yourself inspire for your personal 2013 project.

Sincerely yours

Jochen Schmitz-Linkweiler

» About LSL

LSL – behind this brand abbreviation stands a team of hardcore specialists who dedicate all their energy and passion for the design and development of high quality products and so have never compromised on quality in over 25 years. The result is an increasing number of tech-savvy customers who passionately enjoy individually customising their bikes.

LSL accessories are designed and drawn directly at the plant. Jochen Schmitz-Linkweiler, founder and head of the company is personally responsible for the practical implementation of the ideas of products right to the production stage. Highly specialised manufacturing plants in Germany then produce the individual components out of machined metal, before they are brought on site in Krefeld and accurately measured, meticulously assembled and shipped as LSL products across the world.

LSL is a small company. We are therefore able to build networks to take advantage of technological innovations and synergies. An example of this strategy is our successful cooperation with TÜV Rheinland. With the support of their testing laboratory we were able to develop our own production of extremely resilient handlebars – officially certified by the "TÜV.com" seal

of approval and going far beyond the legal standards and requirements!

Proof of the cutting-edge nature of this is the fact that the Department of Transportation adopted these standards as requirements for testing handlebars.

But in securing our international competitiveness, we are not only consistently exploring promising new avenues and top quality hand-picked German manufacturing companies.

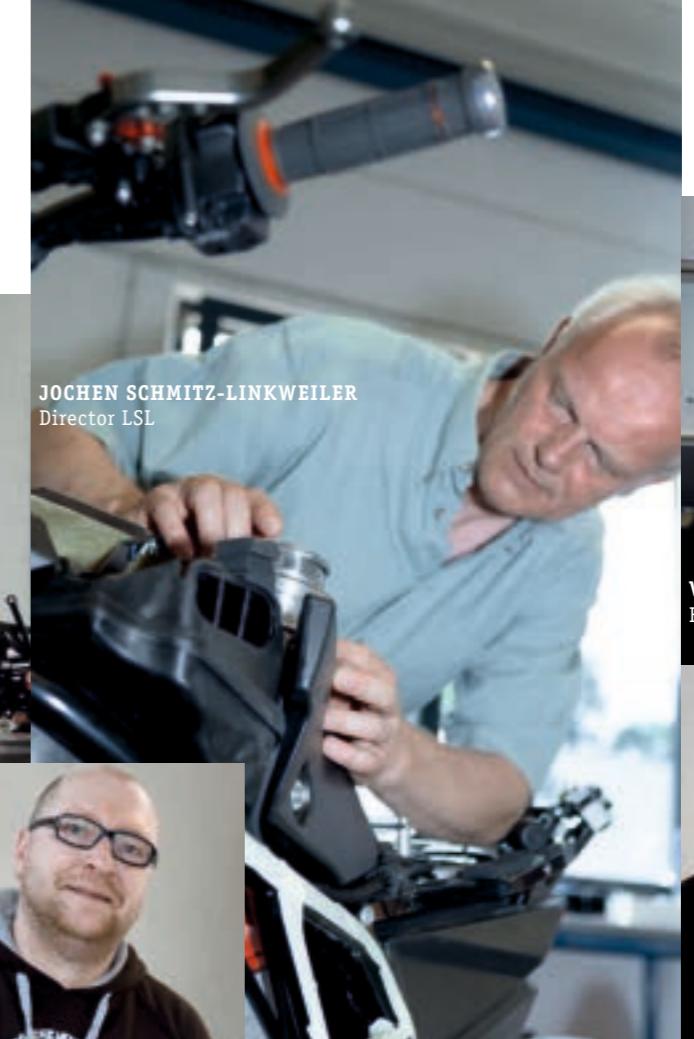

In order to be able to develop and produce exceptional technical equipment, LSL does not just rely on the advice of others, but is firmly committed to our own experience and use in harsh operating conditions on the road.

This year, the groundwork has been enriched by an intense experience for the first time in the off-road sector. On their

tour with screenwriter Uli Breé across the Pyrenees on specially constructed heavy Triumph scramblers Jochen Schmitz-Linkweiler collected intensive Enduro experience, which could be reflected in concrete terms in new products for the retro scrambler.

You can read more in the full "Raise the Dust" report in the following pages.

We also have an open ear for our customers, and listen to you carefully when you criticize our products. Because you and your satisfaction are the highest measure of the sense and function of our accessories and feedback is often based on experiences which can provide valuable information for specific further development.

The complexity of the technology requires a high level of education on our side and in sales. Therefore, we are consciously focused on training! Without exaggeration, we can say that every LSL staff knows the product inside out and is always in a position to assist you competently. Visit one of our authorised partners

and you are guaranteed you will find a company that can advise you about all the details.

The development of a firm is growth. LSL is growing slowly, product for product. We still take the time that is needed to achieve perfection in every detail. And we can afford this "luxury" at any time! For LSL is a flawless-private company – and so is completely independent of the short-term return expectations of profit-oriented investors.

Beyond pure technology we are always dealing with people. Job satisfaction results in the esteem of others, but also fair dealings with each other. Then the whole LSL team pulls together for the benefit of our customers.

We are glad that we can live these principles in the small niche of motorcycle technology and we thank you for letting us make this possible by selecting and using our products.

Raise the Dust

Four Scramblers for a Hallelujah!

Burt Munro once said: „If you don't take a risk everyday, you might as well be born as a potato.“ And he was right. But we still are fools. Risks and adventures are relative, although straightforward risks can be really adventurous.

My friend Helmut popped the following idea into my head: The “Transpyrenäica, a roadbook-rallye across the Pyrenees from the Mediterranean Sea to the Atlantic Ocean, approximately 1,300 kilometres off-road. Difficulty is easy to relentless. Normally you ride this with light-weighted trail-bikes (approx. 120 kilograms). But as a long-time trail-bike-rider, I knew that this would be way too easy for me. And when you are in the middle of hopping into midlife crisis then you need to set yourself higher goals. At the same time JvB-moto and LSL constructed the “Tridays-Rumbler”, based on a Triumph Scrambler for the Tridays, the event that I invented and organize. As I passed on my suggestion to ride this promotion-bike, which was adapted with the finest Öhlins-parts, 1,300 kilometers off-road through the Spanish dirt – before the official presentation – Jens vom Brauck (JvB-moto) and Jochen Schmitz-Linkweiler (LSL) weren't really that happy.

But it's never enough. When I told my plan to a befriended director, he said, that this was exactly the kind of thing he was planning for a new TV-show on ServusTV: some crazy guys who got themselves into tough situations. Good idea!

So I only had to find a bunch of crazy guys to make their lives harder. That's why I told Jens vom Brauck, Jochen Schmitz-Linkweiler and Wim Peters (Öhlins) my exciting idea: we would ride on 220 kilogram Triumph-Scramblers on the legendary “Transpyrenäica” – and

they are my elected guys, my very own dream-team for this crazy trip. Four guys between 41 and 62 on motorcycles, which are - like themselves – totally inappropriate for this hard roadbook-rallye. Four Scramblers for a Hallelujah! The excitement was surprisingly low.

After using all possible mental tricks, legal drugs, please to the honour of men, senseless promises, skilled belittlement and obedient time shifting, I got them and the madness could start! Triumph Germany gave us 4 Triumph Scramblers which we immediately started to customize. We wanted to adapt the 4 motorcycles individually for the persons needs and so 4 different motorcycles began to form. After half a year of motorcycle tuning and body-shaping we finally started in May 2012. Logistics was an adventure itself on this journey. Imagine it like this, when our film crew starts to roll: you need a full transporter only for the equipment, on your motorcycle are permanently two small cameras, the director and camera operator follow you on their light-weighted trail-bikes, another camera-operator sits with a guide, a tone operator and the head of production in a jeep and meet you at agreed destinations. You could say an organised adventure. But way better to say it: organised chaos! But you get the chance to practise a lot. For every different perspective you need to do the exact thing over and over. And after a hard, long 10 to 12 hour ride through mountains you still need to give statements for the camera, when you long for nothing more than a hot shower. A real adventure, don't you think? Might sound strange. But that's really what it was. It was really awesome. But it was also really cold and wet and hot and sometime unbearable. And sometimes

„Due to intensive studies of the Scrambler's off-road capabilities ahead of the tour, we were able to design some highly effective accessories that “saved our asses” a few times traversing rock fields and knee-deep mud. These included a more effective brake pump protection for the low-seated rear brake pump, wear-resistant, non-slip foot pegs, short, adjustable hand levers for clutch and brake; and simple but useful details such as a re-positioning kit for the rectifier unit and the horn.“

» Scrambler Trophy

- LSL-Triple tree with full adjustable 43mm fork with 150mm travel and dust protecting gaiters
- CNC-machined caliper and stainless steel brake hose, CNC-machined brake fluid reservoir
- Scrambler Standard brake disc
- Spoked front wheel with 2.50x19 aluminium rim, with Pirelli tyre 110/80-19 Rally
- Öhlins-shocks S 36P with piggy back, stroke 107mm
- Spoked rear wheel with 3.50x17 aluminium rim, with Pirelli tyre 130/90-17 MT 21
- LSL X01 Fat Bar with high bar clamps (+ 25mm)
- Adjustable brake- and clutch-lever
- LSL head lamp brackets with Scrambler head lamp, machined Instrument bracket

- Short Scrambler solo seat
- Aluminium rear fender with rubber mounting plate
- Blaze winkers with tail light function
- CNC-machined sprocket cover and aluminium chain guard
- Rear master cylinder protection shield
- Alu sprocket 49 teeth, side stand elongation 30mm
- ARROWS 2in1-exhaust system
- Road book box with digital Rally-Multimeter

even cosy. And unforgettable. And it even hailed. If you travel to Spain in May, you expect everything except snow and cold. But if you fight yourself up to 2,000 metres into the mountains, then this can happen even in Spain, Andorra or France. But we longed for an adventure and we got one. And only God knows why, humans think that a real adventure also needs a bit of suffering. That's why we suffered. Sometimes with pride sometimes not that grand with a big glass of red wine in our hand. We passed amazing areas, we crossed grand mountains and sometimes we held our breaths for this amazing beauty of nature around us in the Pyrenees. Somehow this area reminds me of the Dolomites – except the cars. Because even if you get lost on these streets, you are as alone as you are in the open country. And thanks to funds of the European Union the streets are in best shape.

When we finally arrived at the Atlantic Ocean we lost a few pounds, were really dirty and became really good friends. We had an idea and didn't stop in just having one. After half a year of preparations we finally lived our adventure. Sitting in front of the TV and watching football can be nice as well, but such a trip will be forever in your head. Most of the football games will be forgotten.

Uli Brée

»Project Bike Nuda Roadster

!

Geometry:

rake:	64,7°, trail 101mm
wheel base:	1478mm
wheel dimension:	3.50 x 17 spoke, tubeless 5.50 x 17 spoke, tubeless
tyres:	Bridgestone S 20 120/70ZR17 Bridgestone S 20 120/70ZR17
seat height:	850mm
weight:	filled up 189kg

The idea was fixed – a Classic Roadster on basis of the new, edgy Nuda should be possible.

Parallel-Twin and classical steel tube frame offer a perfect basis although Husqvarna did everything possible to hide this potential.

With this Nuda Roadster LSL presents a motorcycle that emerges with classical charisma and further on offers more handling and road performance.

With the round single head lamp, classic seat and fenders LSL work with established elements out of long motorcycle history.

By the use of light spoke wheels and 60mm less fork length they realise better suspension response and more sporty chassis characteristic. The strong LSL Fat Bar and higher positioned foot pegs support the additional road dynamic.

During spring 2013 LSL plans to develop a ready to mount conversion kit on basis of the prototype parts.

Other accessories out of the LSL program like the handlebar, head lamp brackets or adjustable foot pegs are available right now.

» Speed Triple Special – Build your bike

Mounting different LSL parts changes every motorcycle into an individual special bike.

» Get Hold On It

Since our foundation, the development and production of handlebars has been the core competence of the company LSL (Lenksysteme [handlebar systems] Schmitz-Linkweiler).

Starting from a new demand for handlebars for extremely fast bikes with deceleration of more than one G, LSL, in cooperation with TÜV Rheinland have been involved with the proper design and manufacture of tubular handlebars. Riding tests in the early 1990s rendered single loads of up to 80kg on the two handlebar ends and led to a complete redesign of the bending strength of LSL handlebars.

The testing profile created as a result of this analysis, to which every LSL handlebar is held, considerably exceeds the required minimum standard, and has since raised the benchmark for testing custom handlebars.

LSL produces handlebars made of aluminium and steel for 7/8" and 1" handlebar armatures. All handlebars meet our own high inspection requirements.

Special handlebars in tapered construction (internal 1 1/8" and 7/8" external) are now also produced in a special sandwich of aluminium core and carbon fibre shell.

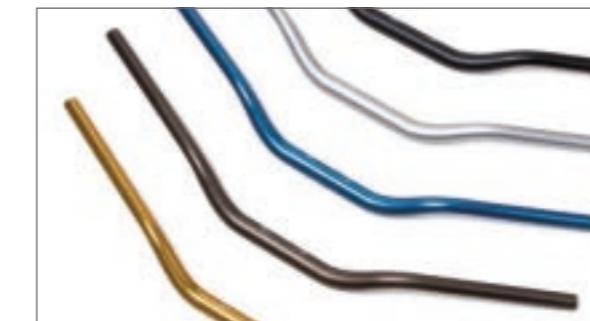

» LSL-Performance:

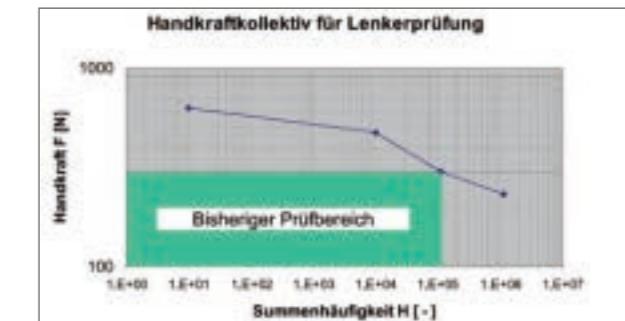

TÜV.com is a quality accreditation, offered by TÜV in Germany and confirms the outstanding properties of the product.

The LSL aluminium handlebars achieve TÜV.com by surpassing German regulations.

All details on website www.tuv.com/de.

Anodised, chromed, painted, carbon covered, polished, matt, pearlblasted – you've got the choice!

The LSL in-house proofing profile is benchmark for a reality check of handlebars, see the diagram above.

Diagram: TÜV Kraftfahrt, Köln

Handlebar clamps

Individual solutions to optimise the handleposition you will find in the tables of the different handlebar types.

Handlebar clamps change the height of series clamp blocks (H) from -45 to +25mm (model specific, see table). The original threaded connection points are used to retain a standard, rubber mounting.

Spacer blocks are mounted between the original clamps and raise the handlebar position by up to 35mm (H).

RiseUp clamping blocks bring the handlebar position up to 35mm high and 16mm toward the rider. Suitable on all handlebar fittings for 7/8" handlebars with 32-35mm gauge and monter 38mm.

» Fat Bar 1 1/8" to 7/8"

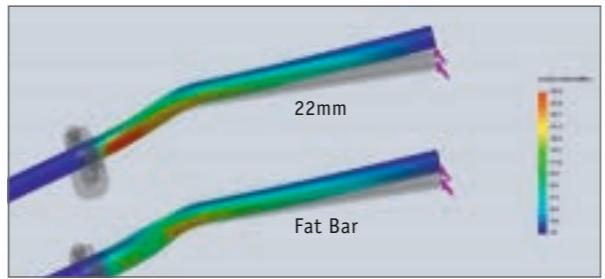

! Please choose fitting handlebar clamps in table on page 16!

Fat Bar

Fat Bar – the name says it all. This new LSL handlebar, with 1 1/8" diameter in the area with the highest loading, offers twice the bending resistance of a standard 22mm handlebar. These handlebars are made out of the high-strength alloy 2014 T6. The bar gives less flexibility and offers more tensile strength in all extreme situations.

» LSL-Performance:

- Twice the bending resistance compared with standard bars
- Manufactured in high-strength alloy 2014 T6, anodised in bright colours
- Fully machined clamps for several naked bikes

Carbon fibre casing

As already known in the high-tech bicycle sector, LSL is now offering a version of the Fat Bar handlebar with genuine carbon fibre casing. Here the aluminium inner tube is coated with a sleeve of carbon fibre. This sandwich achieves a further reduced weight with the same rigidity of the handlebar.

Manufacturing is absolute precision work. Only in this way can the required tolerances of a motorcycle handlebar be observed. During the assembly of these handlebars great attention has to be paid so that the transparent outer layer of the carbon fibre material is not damaged.

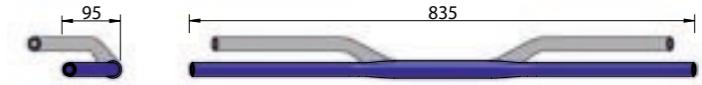

LSL handlebars are used with many exclusive modification projects. This is due to the high quality standards as well as to the extensive finishing options – such as on the Walzwerk V-Max, with which Marcus Walz appeared at the last Milan expo. In the same vein CR&S have equipped DUU models with LSL Fat Bars.

The LSL Superbike handlebar is shown in grey as reference.

Universal Klemmböcke/universal handlebar clamping				

<tbl_r cells="5

» Ø 25,4mm (1")

For a long now LSL offers strong made handlebars in 1-inch diameter in different shapes. Handlebars in this dimension are typically mounted on Harleys and new retro Triumph models.

All steel bars are made out of precision steel tube with 3mm wall thickness. This lay-out offers strong bending resistance and less vibration for heavy and wide Chopper bars.

Getting the only producer in Europe, LSL enlarged this handlebar program by versions made out of high tensile aluminium. Different shapes from sports bar to wide Flat Track style are made in this craftsmanship.

Differing wall thickness, which is stronger in the area of clamping and getting finer towards the grips, offers perfect bending resistance also these bars are made out of aluminium. Surface is either high polished with strong colours or sand-blasted in silver or black.

To install the cables the aluminium handlebars are optionally available with a slot.

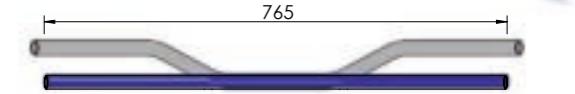

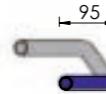

LSL Roadster is shown in grey as reference

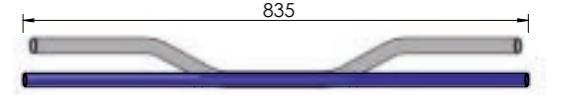

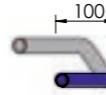

Drag Bar

The classic one for dragster, also in aluminium available.

Type D1

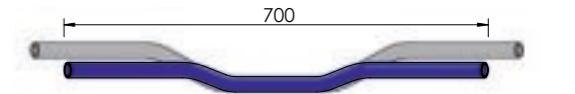

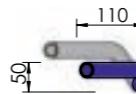

Type D2

Clubman

The consequentially one for sportive driving on Triumph twins.

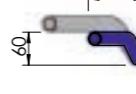

Type S1

Street Bar

Cool and wide, offers extreme driving pleasure.

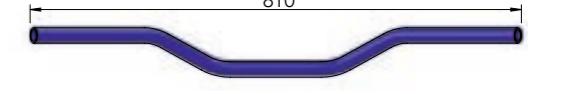

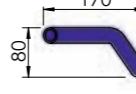

Type 00

Roadster

For excellent handling.

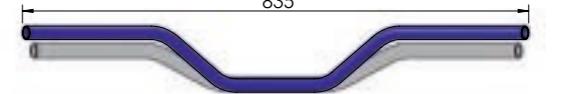

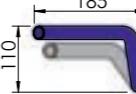

Type 01

Flat Track

Absolute control, not just on the flat track.

Type 14

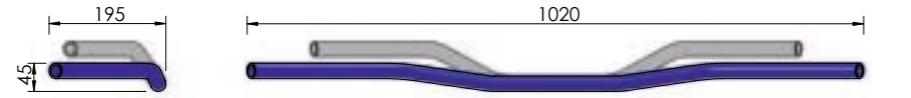

» Ø 25,4mm (1")

! LSL Roadster is shown in grey as reference

Wide Bar

Extra wide.

Type 11

Butterfly

The great rolling one.

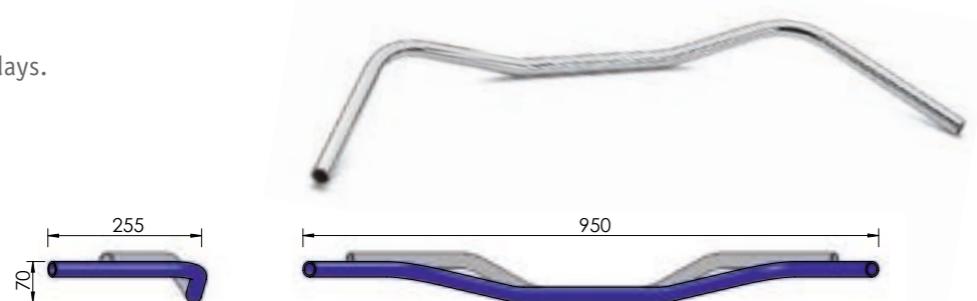

Type 10

Old Style

Styling like in the old days.

Type 12

Shuffle

The strong cruiser.

» Get a Grip

LSL-Sport Grips – the new grips for your motorcycle

The new LSL sports grip offers an extreme handy surface. With 30mm, the straight and slim body has the right diameter for your grip. The optimal selected rubber quality gives a smooth touch and even so offers perfect damping performance.

The grip is equipped with two grooves on both ends to secure the rubber with locking wire as on the race track. Due to the deep grey tone the grip surface is mostly insensitive against dirt.

The grips are made for 7/8" bars and come with open ends for the use of bar weights.

Stylish handlebar grips

Aluminium and rubber:

Grippy rubber with stylish aluminium. Length 125mm; Fits 7/8" units.

Mirror bracket sets

The master cylinders often lack the necessary mirror mounting thread, LSL offers adapting brackets to allow fixing mirrors.

Mirror Adapter

Standard thread M10x1.25 fits on many models. Made of high-strength aluminium, black anodised.

Mirror Broadening

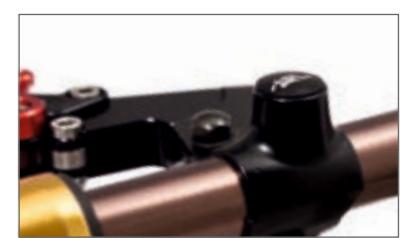

Moves the mirror 40mm outward and 35mm higher. Thread: M10x1.25, M10x1.25 left hand.

Masking Cap

In case of conversion, often the original mirror bracket is no longer required. An o-ring keeps the plug tight in the tread and protects against wetness.

» Rear View

Gonia eMark

Now the popular Gonia is also available in ECE-certified version, called "Gonia eMark". Like Gonia, the eMark is machined of high value aluminium. The clamping made of stainless steel allows an extreme adjusting range. Thread M10x1.25, left and right hand mounting.

Gonia

The Gonia is a fully machined billet aluminium mirror. With 125x65mm area and a convex blue glass. It offers an excellent back view. Mirrors come as left or right version in silver or black anodised. Thread M10x1.25, left and right hand mounting.

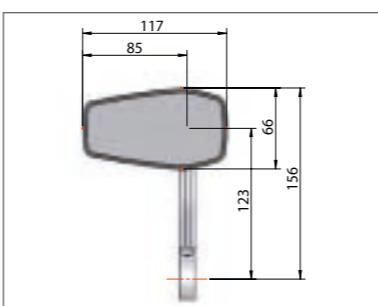

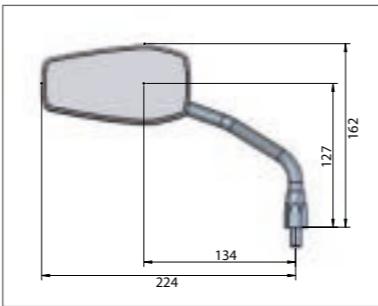

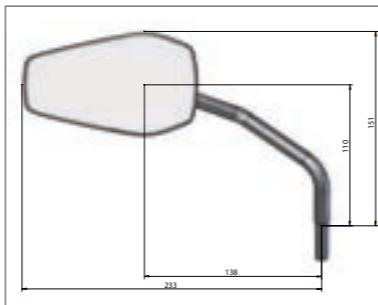

Gonia Bar End

LSL offers an extra-small bar end mirror in the shape of GONIA. The included adapter bushing makes it fit to 7/8" and 1" handlebars. They are designed to fit on the right and left side. Optional bar ends are available to install the mirrors easily without change the controls.

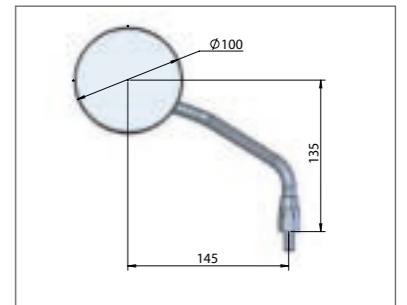

Flame Superbike

Our favourite for Superbikes.
Thread M10x1.25; mirror area 112x80mm; ECE-certified.

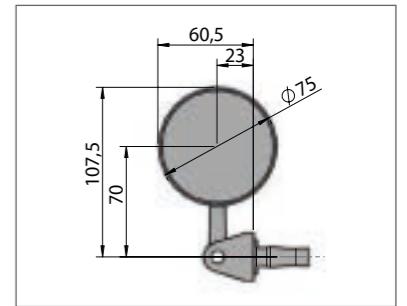

Clubman

Classic round mirror machined from billet aluminium with European homologation, mounting M10x1.25, comes as right or left version.

Bar End

The round mirror is machined out of billet aluminium and equipped with 75mm convex mirror glass. Fitting is designed as a bar end mounting for 14mm diameter bars. Adapter bushes for 18mm are available.

» LSL-Performance:

- Anodised top yokes, weather-resistant
- Ignition lock ring prevents cracking
- The complete offer includes all required parts
- Model-specific designed kit

Superbike conversion kits

Today's Superbikes offer high performance, light weight, excellent chassis and brakes – but they don't suit every customer in their extreme seating position. Therefore, LSL produces special Superbike conversion kits. Modified bikes get new top yokes with handlebar clamps and the special Superbike handlebar. Equipped with this bar the rider reaches a comfortable seating position with perfect handling control and benefits from better brake control.

Sports-Tourer of last generation today are equipped with separate high clip-on constructions. Also for these motorcycles LSL offers special handlebar kits.

Superbike kits for your motorbike

LSL superbike handlebar kits are so designed that they can be installed at a reasonable cost and with normal workshop equipment on the made-to-stock bike. If you are not a trained motorcycle mechanic, allow us to advise you on the conversion and contact a dealer in your area.

Depending on the bike type, different construction principles are chosen to implement the conversion to a superbike handlebar. Depending on the bike model, longer brake hoses, new brake fluid container holder or fairing brackets are required.

It is often unavoidable due to the design of the fairings that these must be shortened or cut out from below. In this case, this is specially specified in the column „Cut fairing“ in the model lists.

The appropriate handlebars are not provided in the kit, but has to be ordered separately because of the possible selection of materials and colours.

- » LSL delivers matching wind screens if required.
- » To replace the mirrors mounted on fairing, we offer the right alternative, look at page 30/31.
- » Brackets for mounting mirrors at the handlebar you will find on page 29.
- » Please also order the matching bar end weights, shown on page 26/27.
- » For older models we offer the necessary fairing support.
- » All parts are available as spare parts as well.

Fat Bar

choose your model in table following pages

GX

For heavy and extremely fast sport-tourer bikes, we offer the top-yoke with clamps for the 1 1/8" Fat Bar. For these bikes the handlebar type X01 is required. The availability of kits for older power-tourers will be gradually expanded.

AX

Adapter plate for Fat Bar handlebars for mounting on the series yoke bridge, precisely CNC machined. Brake hoses and small parts are supplied in the delivered kit

SX

Handlebar adapter, attached to the fork-stanchion for Fat Bar handlebars, precisely CNC machined. Mounting without additional accessories.

7/8" Handlebar

choose your model in table following pages

GL

Top-yoke, CNC-machined, hollowed underside. The original ignition lock can be mounted safely. For modern superbikes, we always use a complete LSL top yoke.

AL

Bolt-on adaptors, CNC-machined, design and colour co-ordinated to the top yoke. The adaptor version is the easiest kind of conversion. You only have to bolt on. No need to change ignition lock or to adjust the steering-head bearing.

SL

Clamped to the fork-stanchion, CNC-machined, colour according to the top yoke colour. For most Honda and BMW models we have designed an adapter to clamp around the stanchion rising above the top yoke.

Please order handlebar (and accessories if listed) in addition!

» Bars are the same for all clamps. In case of damage it is possible to order one single piece clip-on bar as a spare part.

» As bar end weights can be used all products in diameter 14mm for aluminium handlebars, look at page 27.

The ideal bar angle provides optimal wrist position. This eliminates the need to adjust for back sweep and hand lever positions are possible that would not be realised with a complex adjustment mechanism.

A particularly lightweight stub unit was created thanks to the load-optimised design of the retaining bracket. The Tour Match combines high rigidity with surprisingly little weight, so a stub half (\varnothing 46mm) weighs just 460g.

The Tour Match will be delivered with all accessories for each respective model (mounting parts for the hydraulic fluid reservoir and additional spacers for fairing brackets) and TÜV approved. The handlebar tubes are not model-specifically drilled.

» Match your Bike

Tour Match clip-on kit

Today's Superbikes offer fantastic performance but with an extreme riding position. Help comes from LSL Tour Match clip-on handlebars, offering a more comfortable seating position. Like no other clip-on, the patented construction improves the handlebar position radically. The clip-ons are machined from billet aluminium and bring the handlebars over the top yoke. Together with a 2° bar angle they create an ideal handling position.

Because of its load bearing frame work design the Tour Match is an extremely light construction. In spite of its high flex resistance, we face an extremely low weight of only 430g per one piece of Tour Match clip-on.

The bar tubes are made of the same high-strength aluminium we use for our Street Bar production. The thickness here is 4mm and a screw, gripping in the recess of the tube secures the bars from slipping out. It is possible to order a single piece clip-on bar as spare part separately.

The Tour Match is supplied in kit form for several different bikes. A kit consists of the clip-on and all

mounting parts (brake hoses, parts for the hydraulics, etc) and fitting instructions. The bar tubes are not pre-installed with the holes for the switch units. For placing the holes in the right position we recommend the use of a LSL drilling template.

For some bikes, it is necessary to modify the lock-stop. In this case, you will receive necessary lock stop chips. As bar ends you can use the handlebar weights (14mm) from the LSL range.

» LSL-Performance:

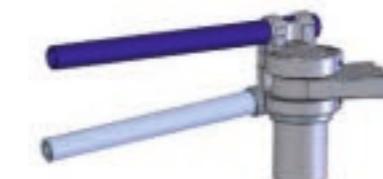

- Perfect grip above the top yoke, ergonomic bar diameter
- Fork clamp is made from high quality billet aluminum build for maximum load
- Every clip-on comes with a bike-specific mounting kit

» Race Time

» LSL-Performance:

- stress optimized design of the machined clamps
- ergonomic bar angle
- Clip-on tubes are changable, choose your favorite colour
- special size 1" available

The secret of the stub arm is the correct handlebar tube position. It is completely unnecessary for the manufacturers of extreme super sports bikes to take handlebar tube angle of ultra slim racing bikes of the 80s.

LSL has been working for many years with the determination of the correct wrist position. Therefore the LSL Sport Match versions combine the sporting demands of a low positioned stub arm with the opportunity to complete longer downhill stretches without tiring.

That this layout result in riding fast has been proven by our many racing successes.

» Sport Match – the stylish racing clip-on

The Sport Match clip-on is the classic construction carrying the bars close to the stanchions. The bar angle is 5°.

» Speed Match – a compact Sportler

A compact clip-on of medium bar height. Controls can be moved even further inwards. The bar angle is 4°.

» Offset High – the name is program

The Offset High construction brings the clip-on grips forward and higher. These Offset High clamps are designed for sport bikes with high fitted RAM air-intakes. The bar angle is 5°.

The race sport chassis expert Kalex also applies LSL clip on sets.

Complete kit for selected models

For some specific models LSL provide complete Speed Match and Offset High kits. These each include all necessary mounting hardware and silvery handlebar tubes.

Model	Type	Year	Δ	Item No.
Offset High Kit, inkl. Bremsleitung/brake lines included				
Yamaha YZF-R1	RN 09	02-03	+5,0mm	153Y088H
Yamaha YZF-R1	RN 12	04-06	+3,0mm	153Y094H
Yamaha YZF-R1	RN 19	07-08	+5,5mm	153Y094H
Speed Match Kit				
Kawasaki ZX10R	ZXT00J	11-	+2,5mm	153K136R
Daytona 675		09-	+2,5mm	153T045R
Yamaha YZF-R6	RJ 15	08-	+3,0mm	153Y118R

Please order clip on tubes, clamps and Brake Box brackets if needed separately.

Clip-on tubes

Bars are the same for Sport Match and Offset High. In case of damage it is possible to order one single piece clip-on bar as a spare part.

» The Right Setting

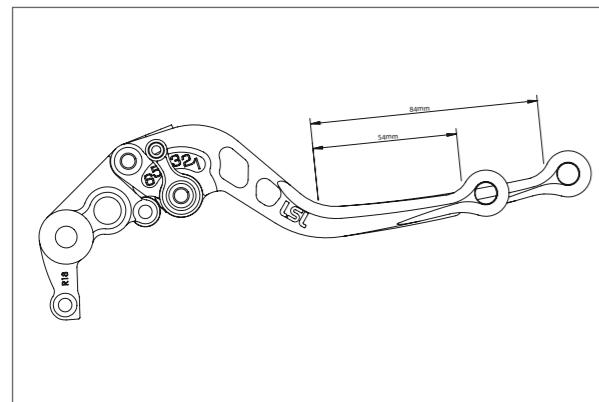

Lever in short version,
difference to long version: -3cm

The Right Setting – using the fully machined LSL brake and clutch levers

The right ergonomic shape, lever length and rounding-off provide the optimal combination for brake and clutch performance.

For all hand sizes, the positioning of the lever is adjustable in 6 different positions.

The adjusting ellipse is supported with ball bearings. The adjusting lever, with its protruding top, is especially grippy and also allows adjustment during riding. The bearings of the lever mechanics are made from long-life brass.

Lever grip at short and long version

The standard version of the LSL lever is made to be accessed by the whole hand. The short version is best suited to well-functioning brakes and can accommodate a three finger grip. This short version also comes with ABE.

The levers are equipped from the factory with red adjusting levers. The equipment can be selected with optional gold, blue, silver or black adjusting levers when ordering at no extra cost.

» LSL-Performance:

TÜV.com is a high quality accreditation offered by TÜV in Germany and confirms the outstanding product properties. The LSL clutch and brake levers achieve TÜV.com by surpassing German regulations. All details on website www.tuv.com/de.

» Brake Box

! Professional brake fluid reservoir,
"TÜV" certified for many models

LSL-Brake Box

A long overdue replacement for those ugly plastic brake fluid reservoirs. LSL now has the slick alternative.

Different safety aspects are important. For example, the reservoir needs to hold the required volume of brake fluid. All components need to be resistant against the corrosive fluid and less weight is desired. And after all, it needs to be a good looker.

The LSL-Brake Box ticks all the boxes

The Brake Box is certified by the "TÜV- Rheinland" and comes either in anodised black or silver, volume is 36ml. There is even a version for your clutch or rear brake with volume 20ml. For both reservoirs are mounting brackets available.

LSL Brake Fluid Reservoir for BMW models

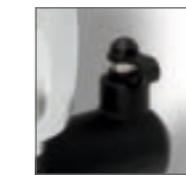

LSL has developed a brake fluid reservoir to specifically match the brake pump on current BMW models. The bottom of this brake fluid container is designed to replicate the OEM part which makes for an easy replacement.

If the OEM container came equipped with a foam cylinder, the LSL replacement product will be shipped with one as well.

The LSL brake fluid container can only be installed on BMW motorcycles with 2nd Generation Integrated Anti-Lock Brakes that are equipped with a round plastic reservoir bolted directly to the brake pump. Some models come with two different brake pumps. We'll be happy to find out which one fits your motorcycle, all we need is the chassis number.

Note: This product is not designed to be used on vehicles with external, rubber-mounted containers (e.g. various F800s)!

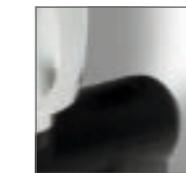

! The BMW Brake Fluid Reservoir is not designed for use as a clutch fluid reservoir, because the rubber parts are not resistant to the required mineral oil fluid.

Brake Fluid Reservoir 244BB41 ...

» For use with brake pump version "Old":

The old version of the pump is equipped with a brake bleeder and the handlebar clamp is bolted on with two M5 screws. Usually, the container comes with a yellow foam insert.

Brake Fluid Reservoir 244BB44 ...

» For use with brake pump version "New":

The old version of the pump is equipped with a brake bleeder and the handlebar clamp is bolted on with two M5 screws. Usually, the container comes with a yellow foam insert.

» LSL-Performance:

- Stainless Steel braided with Teflon® hose
- Fittings in aluminium, a range of bright colours or chromed
- Transparent covered against dirt and to avoid scratches to lacquered parts

Stainless steel brake hoses

For an improvement in braking systems the exchange of standard brake hoses for stainless steel braided hoses is the easiest step. LSL produces these brake hoses in-house under licence from Swiss brake specialist, Speed Brakes.

The brake hose fittings are produced out of a special alloy that offers optimum bending qualities. With a costly anodising process (compressing, anodising, brightening) the Swiss produce a unique colour shine.

LSL braided hoses have a Teflon® hose inside and are always covered by a transparent synthetic coat. The synthetic hose avoids brake dust penetrating into the wire braid and saves lacquered body parts from getting scratches. The surface is easy to clean with a soapy detergent. Unlike ordinary rubber hoses the stainless steel braided Teflon® hose offers a life time reliability and needs no further change.

LSL braided hoses are available with different coloured fittings.

The standard colour is anthracite. Banjo bolts come matching in anthracite as well. Fittings and banjo bolts in chrome-plated finish are at an extra cost.

All LSL braided hoses can be supplied with matching banjo bolt sets.

For model specific lines, please contact the LSL team. Please have your vehicle documentation readily accessible.

Order single lines:

Item No. „220 -“ + length (e.g. „030“ for 30cm) + color fittings (e.g. „SW“ for black) + color hose (e.g. „grey“) + offset of the fittings (for example, „0°/20° front“ and „0°/0° sideways“)

Ordering a vehicle-specific kit:

Please let us know the vehicle type and chassis number, and the desired color of the fittings and hoses.

- Aluminium housing, CNC-machined body brackets
- 7 setting adjustable, 6 different lengths
- Model specific mounting kits

Steering control

Modern motorcycle constructions lead to less weight and wider tyres. Besides better handling and better acceleration the negative result of this development is a high sensitivity to the "tank slapper" phenomenon. This leads to less stability during rapid acceleration and ultimately less fun.

To avoid this problem the use of a steering damper is required on the race track. With specified constructions LSL now brings this damping instrument to your bike.

The damper unit is well proven for stability and safety. It consists of a stiff aluminium housing containing a 7 setting adjustable hydraulic damping system. Different kinds of damper brackets meet different requirements for the mounting position.

For Custom bikes the damper is also available in an oval shape and anodised in silver. For sidecars or trikes we propose the oval type damper with 150mm stroke.

T LSL steering damper "Titan"

Damper unit: round, titan anodised
7 setting adjustable
rod diameter 9mm
Bracket: billet aluminium with pillow ball

0 LSL steering damper "Oval"

Damper unit: oval, silver anodised
7 setting adjustable
rod diameter 9mm
Bracket: aluminium shell with ball joint

LSL-Performance:

- Longitudinal: 30mm; 4 settings
- Vertical: 22mm; 2 slides
- grippy knurled pegs
- anodised colour black or anthracite corresponding to the frame colour

2Slide rear set

Thorough testing and race track development led to the now well established LSL adjustable rear set – the 2Slide. Its design reflects the status of technology in the world of racing.

The position of the pegs can be adjusted longitudinally by 4 positions whilst the height can be shifted in two slides, hence the name to the product. The pegs are short and have a rough knurled surface for extra grip.

The gear lever is designed in a banana-shape to avoid shifting during active cornering movement. The length adjusting of the gear shift rod is achieved through interchangeable distances.

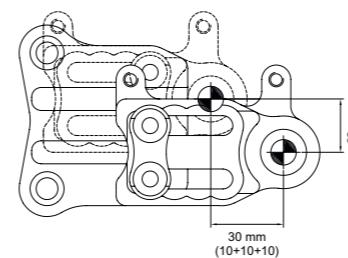

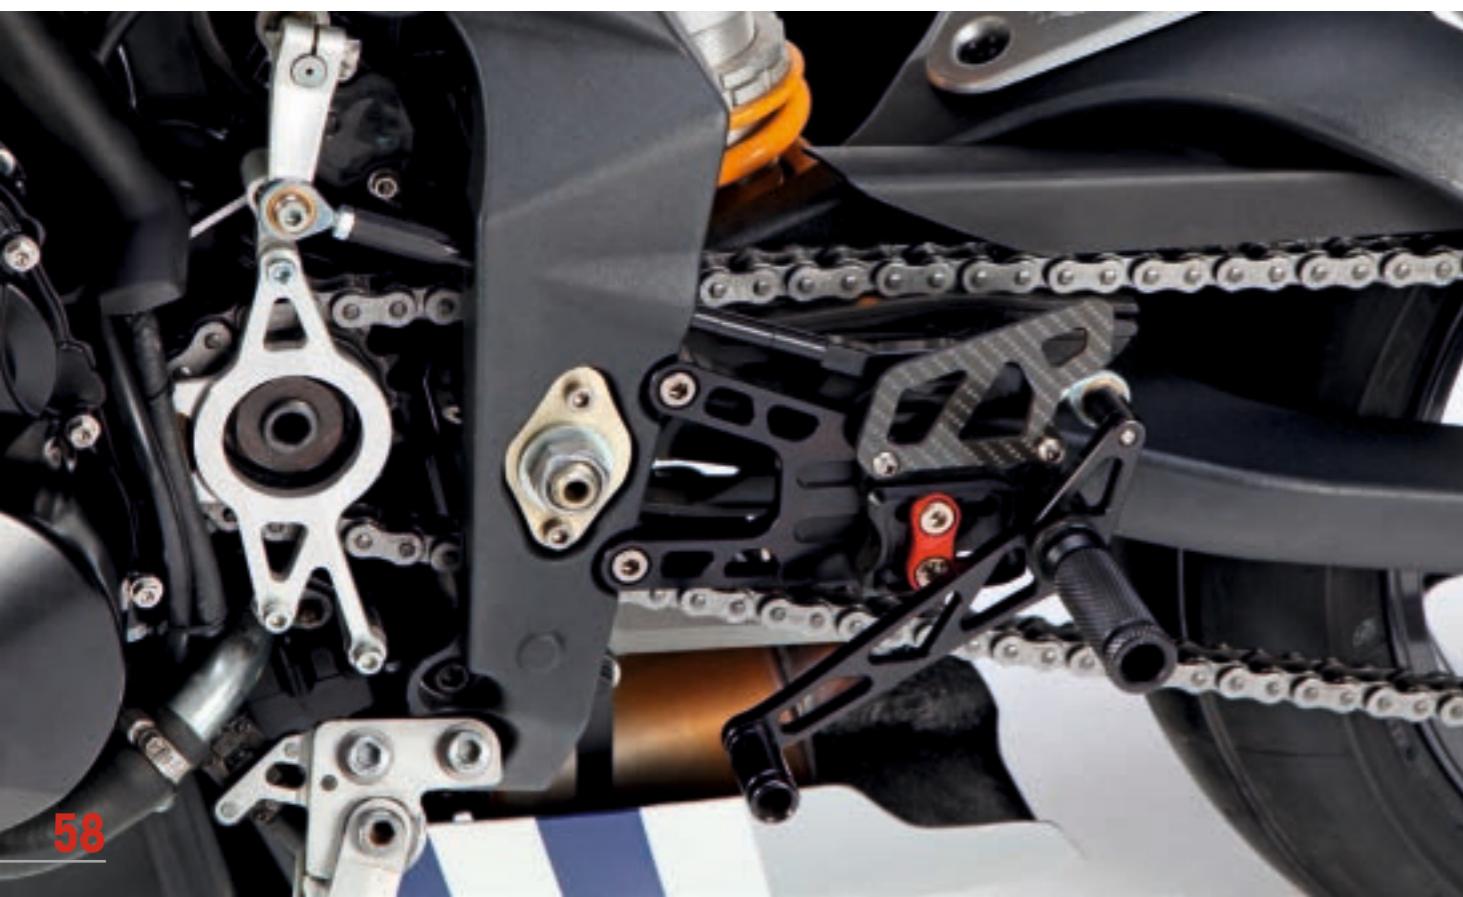

» 2Slide-Performance

In some instances, the pegs are positioned too far forward by the manufacturer. A good example is the current Triumph Street Triple Cups model. LSL offers a foot rest kit to professionally solve this, improve the riding position and ultimately the handling. And: This is the kit with which Arne Tode became the German Champion on his Daytona 675!

LSL also support the stunt rider Mai-Lin: She chose the 2Slide system for her Street Triple!

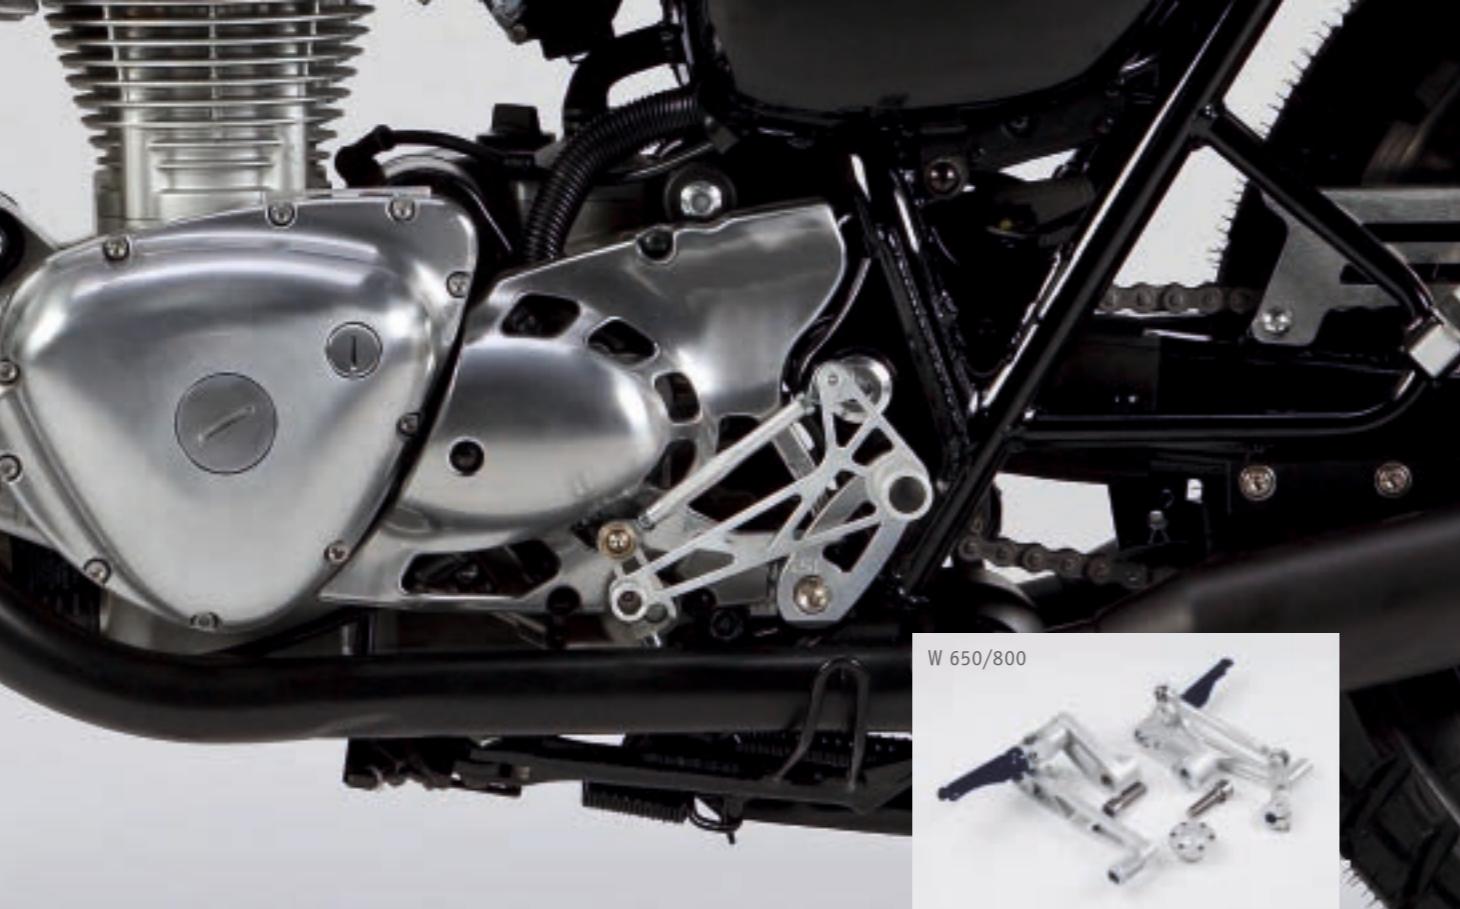

Adjustable positions:

Longitudinal: 30mm; 4 settings
Vertical: 22mm; 2 slides

To enable the fitting of the 2Slide LSL rear sets in the reverse shifting position, only the gear shifter has to be reversed on many models. Some models require a specific adaptor kit: Please contact our colleagues for advice on your individual requirements.

W 650/800

LSL-Rear Sets

The LSL rear sets are inspired by the engineering construction used for bridges. By using this design on every single part of the rear set LSL builds very stiff, yet super light rear sets, which also looks extremely good. Footrest hangers and levers are produced from high quality aluminium. To prevent the play of the levers on the bearings we use long

life PTFE bushes. LSL rear sets therefore offer a more precise gear shift. Every LSL rear set is anodised for weather protection. LSL was the first manufacturer to supply after-market rear sets with the option of foldable pegs. Even at extreme cornering the foldable pegs give extra safety when touching the ground. This option has to be ordered extra.

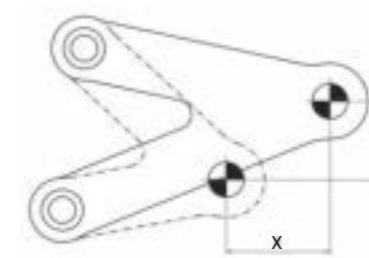

All Cup motorcycles were fitted with the obligatory LSL-rear rest system. Tracks such as this off-road section would not have been manageable without the adapted foot rests. And, in particular, in these races the foldable variant demonstrated powerfully its resilience and performance.

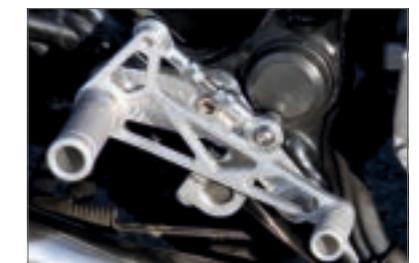

Triumph Thruxton

On the Triumph Cafe Racer Thruxton, the rear sets are positioned too far back. The LSL-rear sets allow for the foot position to be moved forward by 3.5cms (approx. 1.4"), which delivers significantly improved foot control for the rider and, consequently, bike handling.

Sportster XL 883/1200

Over the manufacturer's standard foot rest position, the LSL-System rear sets provide the rider with a noticeably more dynamic seating position.

Honda Seven Fifty

LSL now offers system kits for Youngtimers such as the Honda Seven Fifty. This mod is a must for Cafe Racer projects!

Rastenhalterung klappbar/foldable foot peg unit					
black				110-GLKSW	
silver				110-GLKSI	

* Caution: Side stand needs to be removed or modified.

Where brake lines are stated in the fitting table, please order these at the same time. This is required to enable the fitting of the LSL System foot rest kit.
All LSL System components are of course available as replacement parts.

LSL-Performance:

- All aluminium parts anodised for weather protection.
- 17mm wide long life PTFE bushings
- Foldable pegs optional
- Bolts made of stainless steel
- Road legal equipment

Please order foot pegs and foldable foot peg linkings separately.

Equipped as standard the LSL-rear set will be delivered with fixed foot peg linkings.

(+)

(+)

You will find the matching foot pegs on page 64.

For universal use LSL offers a kit to mount pegs to any hanger. The foldable adaptation is precisely engineered out of aluminium. Spring and washers are stainless.

»Foot Pegs

LSL

! Please order the foot peg linkings in addition.
You will find them in table on page 76.

LSL-aluminium foot pegs

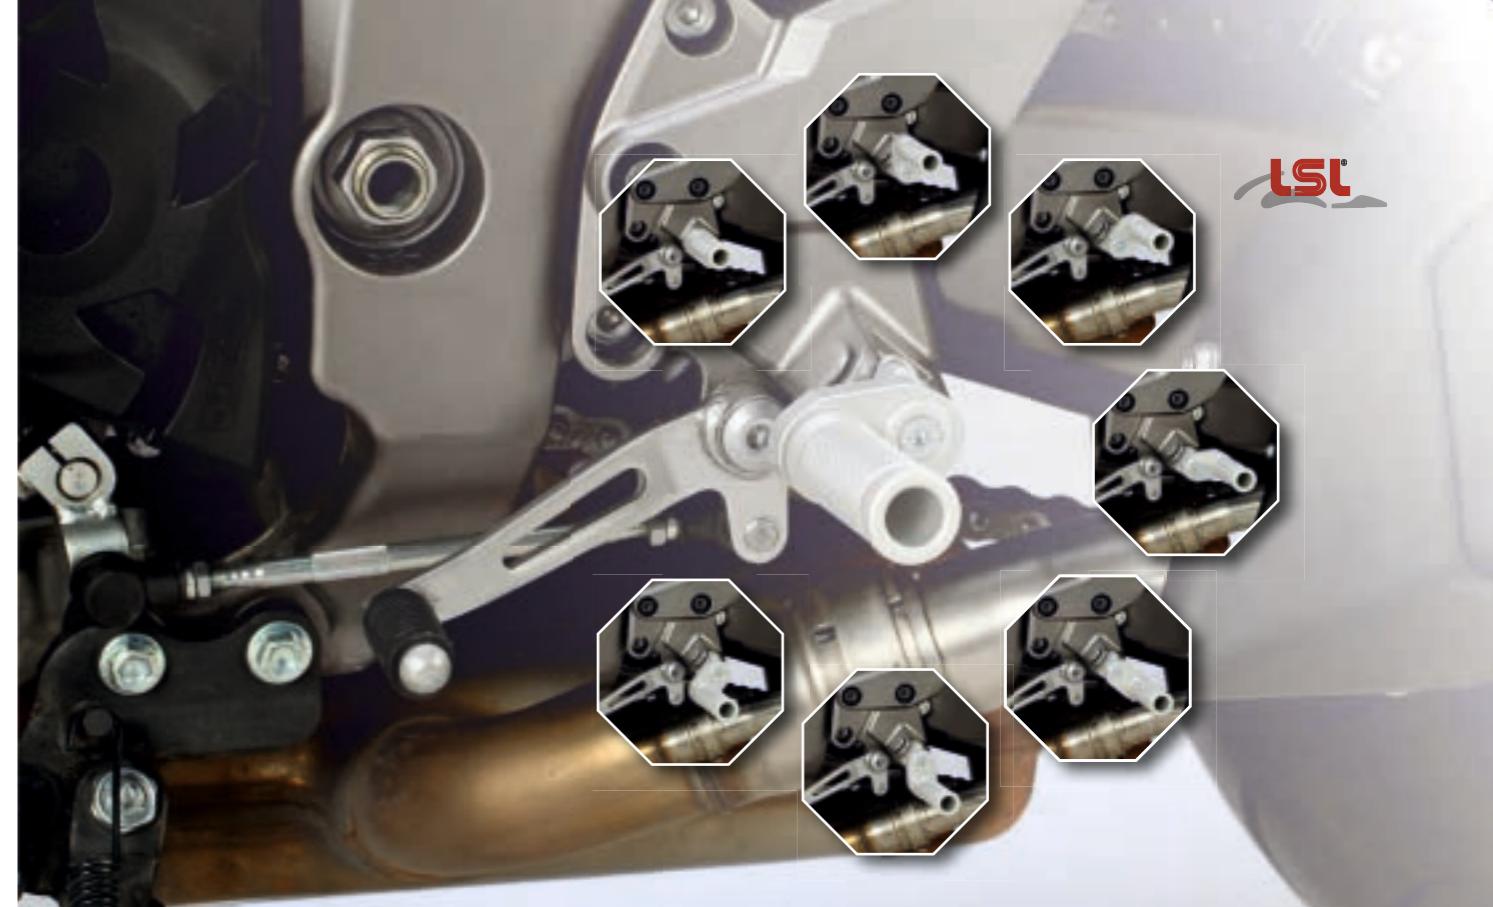

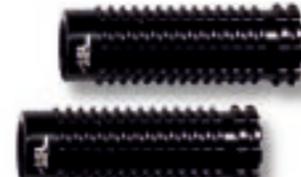

LSL-foot pegs are extremely light and machined from billet aluminum. The foot peg is shaped and designed for optimum strength.

The surface is knurled for extra grip and all sharp edges are rounded for safety reasons. Precisely machined adaptors provide fitment to most modern bikes.

» Foot peg Sport, length 85mm

» Foot peg Racing, length 70mm

» Foot peg Extreme, length 78mm

Improve the foot position through our adjustable foot rests:

With this kit, sport riders and touring riders can improve their seating position. Both, a raised or a comfortably lowered position are possible. The actual position is quickly adjusted with an Allen key, so you can change it on the fly if you choose so.

How it works: The adjustment allows for 8 individual positions around a radius of 25mm (1") to create the perfect individual set up for you.

The kit is delivered without the actual pegs. For a peg that suits your bike, please check availability for your model at LSL.eu or contact our colleagues for specific advice. Of course, all components are approved to German ABE standards.

Foot peg linkings for your motorcycle you will find in table on Page 76 and following.

» Adjustable foot peg linking for standard mounting

»Footwork

Please order foot pegs separately, types and colours you will find on Page 64.

Pillion peg mounting kit

Pillion foot pegs made from anodised billet aluminum are available for a variety of naked bikes. They are sturdier than the standard ones and look better too.

The mounting of the foldable pegs is made from high quality billet aluminium. The pegs need to be ordered separately from mounting and foldable brackets.

Foldable peg adaptation set

For universal use LSL offers a kit to mount pegs to any hanger. The foldable adaptation is precisely engineered out of aluminium. Spring and washers are stainless. For fastening M8 screws are used.

Machined gear shifts

To replace the original which lacks of a lot of play, we offer a gear/brake-unit. The lever is pivoted on a precisely machined axle. A brake lever can be added in the same design. Coloured LSL foot pegs also match the lever unit.

»Lift Up

LSL-Lifter – practical contact rollers for mounting stand

We all know the hassle of bringing the gripper of the assembly stand into the small retaining studs. Racing teams in endurance racing have been using large guide rollers for many years, through which the engaging of the lift is easy to achieve.

LSL offers this experience from endurance racing for your motorbike with the LSL Lifter. These large guide rollers (diameter: 56mm) are finished in wear-resistant plastic and come with visually attractive coloured bolted mounting sleeves.

All lifters are supplied with an 8mm high spacer. Different threads are used for bolting. Check which thread is required for your motorbike.

» Crash Protection

Uli Bonsels, Service Manager Germany comments his race crash at the Street Triple Cup

„Dank eurer tollen Crash Pads blieb mein Motorrad, man mag es kaum glauben, fast unbeschädigt und ich konnte das Rennen sofort wieder aufnehmen. Die Crash Pads an Motor, Vorder- und Hinterachse, das Lenkerendgewicht und die Fußraste haben ganze Arbeit geleistet und jeglichen Schaden vom Motorrad fern gehalten. So soll es sein!“

Crash Pad – the alternative to simple and ugly looking nylon mushrooms.

Our new LSL-Crash Pad is a combination of shiny aluminium with a replaceable plastic insert. The alloy part is machined and has a very smooth surface that is either anodised or powder/transparent coated depending upon colour. The rounded shape prevents the pad hooking into the tarmac or street surface.

The plastic insert reduces the impact when the bike falls over and slows the bike down when it is sliding. In the case of a small crash simply replace the plastic insert for repair.

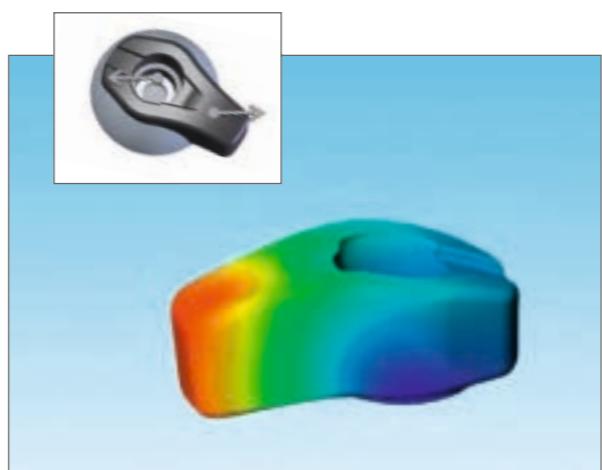

The availability of different colours and surfaces allows coordination with the bike's original colours.

» Crash Protection

The backward located "touch-down" area, of the plastic inserts steers the bike whilst it is sliding, preventing the bike from spinning. There is less risk of overturning and thereby reduced damage to the bike.

A 3D computer simulation shows the basis of the design concept and shows colourfully the force/impact the pad absorbs. Incident records of many years confirm this function.

The Crash Pads are available with very solid mounting kits for most bikes. The range of Crash Pads is always expanding, please enquire if your model is not listed. We supply Crash Balls for axle protection in the same unique design.

Crash Pad: choose shape and colour

Crash Pad

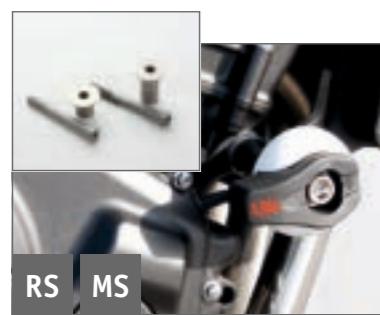

Crash Pad Classic

Crash Pad Plastic

Depending on the model, LSL offers different fitting kits. See fitment guide for your bike.

Fastening with engine bolts at the frame.

Adapter plate mounting on the frame; avoids damage by the engine bolt.

Adapter plate mounted over engine covers.

Pad insert comes separately as spare part. The logo printing shows the right side to mount.

Kit with machined aluminium brackets

» Urban Headlight Kit

LSL provides universal headlight kits for slim naked optics. The mount is machined from solid aluminium; the holding clamps are available in various fork diameters for standard Naked bikes.

The fork width may need to be offset by appropriate sleeves. The distance between the slidertube clamps is 115mm. When planning, please note that the spotlight is placed very close to the fork for optical reasons. A conflict with the original instruments/brackets and the ignition switch may occur, depending on the bike.

The brackets for the Urban Light are available in silver or black. They are finished with a noble surface.

Triumph Headlight Kit

The characteristic look of the Speed Triple models – the twin headlights – are crucial for the Streetfighter scene, but not to everyone's taste because of this. If you want to get away from this look, or just simply mount stub handlebars, there is no alternative to new headlight optics.

LSL provides two conversion options: conventional round headlights or the modern urban headlight kit. Conversion kits are available for all three-cylinder Triumph Naked bikes.

For the Triple from 2002 a milled holder has always been included for the instruments. As a replacement for forcibly omitted air intake on the Street Triple (as standard in the lamp holder), a new intake aperture is used in the intake tract.

» Headlights and Accessories

Headlight **Scrambler**, 145mm clear glass, H4, ring black matt or chromed

Headlight **Clubman**, 6.5" clear lens prism, housing black matt or chromed

The **Flat Track** fork cover is equipped with a 145 mm H4 headlight and parking light. The fastening is achieved with cable ties on the stanchions as with the Enduro Sport. For sports use, the front plate is available as a closed GRP shell.

Headlight **Eighties**, 6.5" clear lens prism, housing black matt, ring black matt or chromed

» LSL headlight brackets

and clamps are made from high quality anodised billet aluminium. The offset between bracket and clamp allows an adjustment in width of up to 20mm. Therefore the kit can be used for different size head lamps and forks.

» Universal bracket kit

»Plate Hangers

Aluminium number plate hanger

are also available for a number of naked bikes and sport bikes. Please check the model table on our web site www.lsl.eu.

The number plate bracket is made from 2mm aluminium and is extremely rigid because of its double folded design. A rubber plug is used to support the number plate on its bottom side. Number plate bracket and accessories can be ordered separately. A universal number plate bracket can be ordered for an individual fitting to other bike models.

Depending on the original components of the bike the plate hanger bracket comes with number plate illumination or complete LED tail light. There are mounting holes for aftermarket indicators (10mm). Indicator stem extensions might be needed, depending on size of number plate.

For Bonneville and Thruxton models LSL delivers an inner fender as splash guard

Triple tail conversion

As a substitute for the protruding fender and license plate bracket, LSL provides a short and sweet aluminium variant. The conversion kit for the Triumph Triple includes a new rear frame cover in black coloured plastic, milled holder and the number plate holder with LED backlight.

460-UNI

Plate holders and accessories are also available separately. Thereby it is also possible to mount the license plate holder by your own solution on other motorcycle models.

D-Light LED indicator

Well designed aluminium housing, noble finished surface, resistand against vibrations, ECE-certirfied.

Aluminium indicator extension
to mount accessory indicators, thread M10x1.25.

LED Mini

Extrem small LED back light with integrated number plate lighting.

Lucas-Style

LED back light, strong LED lenses, no number plate lighting.

motogaget m-Blaze CONE –

a handlebar end indicator in a radical new design. With the new, patent-pending TranzLight technology, the transparent body of the indicator itself becomes luminescent medium. This progressive approach to development fashions the light directly over a crystal-like glass body. The m-Blaze CONE handlebar indicator has been tested and approved according to ECE as a front indicator.

LED Mini indicator, ECE-certified
Front & rear mount possible, 2 measurings available

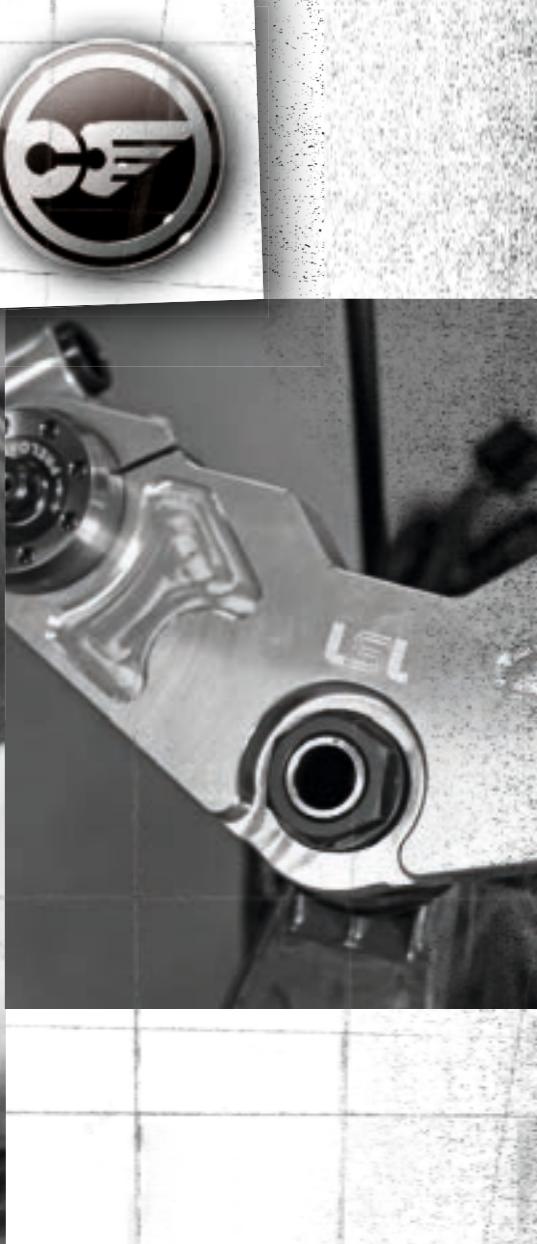

Clubman

Classical mini back light with LED. The Bracket is made of machined aluminium, red glass.

» Clubman

**Aesthetics is not a question of taste, but balance.
The latter comes from a technically sensible and
functional design.**

Since its beginnings, LSL has studied the design of chassis components. We develop our own geometry concepts, and test, test, test – and in the end the results speak for themselves: excellent chassis data.

In our very own motorcycle manufactory, the LSL team turns good base motorcycles into true, passionately hand-crafted Clubman models, combining harmonious, classic shapes with subtle techni-

cal features for an excellent driving and braking performance – hence building worthy successors to an honorable generation of motorcycles like Cafe Racers and Co.

As a matter of principle, we do not manufacture in series, only on demand. Because only the individual combination of components such as suspension, handlebars, and seat will give a Clubman its true character.

Clubman® is a registered trademark of LSL Motorcycle GmbH. It has been trademarked in Europe and the US for several years.

Visit our website at
www.clubman.de

»Motorcycle Steering

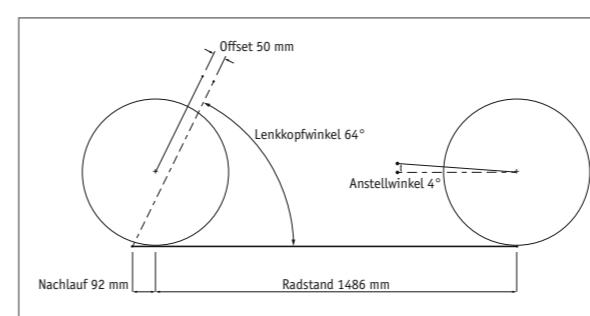

LSL triple trees

Since founding the company LSL works on the construction of chassis components. Just in the beginning when designing the first Super Moto style wheel conversion or the first Sportster in Clubman style, always the careful view on the geometry of the motorcycle was in the focus of the development.

Today we are able to work easier and more precise. Basis for this ability is the measuring tool, developed in house by our engineers, which enables us to record the real steering angle, trail and wheelbase of a motorcycle.

The triple tree kit comes without a bearing stud which has to be removed from the old one and pressed into the new one. LSL offers this service for free in our shop.

Significant influence on data of the steering geometry have the offset of the triple tree, the length of fork and shocks and the diameter of the wheels. We do not want to bother you with more technical details, only so much that LSL with knowledge of all these details is able to design certain triple tree kits to put a motorcycle into modern steering geometry.

With lifted chassis (by longer shocks) the so converted bikes get real sports competition.

LSL triple tree kits by shorter offset offer a more precise steering and better high speed stability. From high tensile aluminium CNC-machined LSL yokes are stiffer but also lighter than standard.

For the mounting of strong Upside-Down forks LSL has the triple trees with clamping 50/54mm.

The top-yokes are prepared for the use of clip-on bars. For mounting handlebar clamps for straight bars the yoke are pre drilled (you only have to drill through) Clamps are available for 7/8", 1" and 1 1/8" bars.

» Triple tree kits and mounting parts

Together with the conversion of the triple tree the change of standard headlamp brackets is obligatory. LSL for that offers a wide program with brackets (see p. 88). Matching bar clamps for the mounting of straight bars you find below in the table.

Clubman rim kits

For the distinctive wheel sizes of Clubman models LSL offers the necessary rim kits in modern dimensions. The rims come with new spoke kits in stainless steel when necessary. For use of these wheel sizes always the conversion with LSL triple trees is required. The rim kit with 19"/18" for Scrambler you find in the triple tree table left.

Spoked wheels for tubeless tyres

A light spoke wheel for mounting tubeless tyres was for years the wish of many customizer. Now the KINEO wheels satisfy this desire.

The rim is produced from a blank built using a new process permitting the use of 7000 aluminium alloy. The final phase includes CNC machining. Aluminium valve supplied.

The hub is obtained from a forged 7000 aluminium alloy and finished by CNC machining.

front: 4,4kg incl. Adapter and brake discs
rear: 6,9kg incl. Adapter

The double swaged 5/4mm spokes are produced in high-resistance stainless steel. The 28 front and 32 rear spokes are perfectly rectilinear. The spokes are turned on the hub with a normal hexagonal wrench. Eventual replacements may be made without disassembling the bike tire and wheel.

Nipples geometry is the greatest innovation of KINEO wheels. These elements are fixed on the rim in a parallel position with respect to the wheel axis and require no holes on the rim. Standard colours: Hub black, rim black, nipples titanium. Other colours are available on request.

VELONA instruments

The new Japan made VELONA instruments combine an appealing optic with a high functionality at a reasonable price. The housing is made out of stainless steel and comes either in high polished surface or mat black painted. The allusively enlightened indicator is moved by a high-grade electric pecking motor.

The speedometer offers display of mileage, trip counter, timer and on-board voltage. The digital signal for operating the speedo has either been taken from original sensor or by optional available accessory sensors out of LSL program. So even ready to mount adapters for original speedo gearings are available.

The tachometer offers the record of maximum rev-counting and hours of operating. Rev counting signal is taken directly from ignition electronic.

With the instruments a universal mounting bracket is always included. Fork size related brackets are available for 39, 41 and 43mm stanchion diameter.

motoscope classic

The motoscope classic is a multi functional instrument in a classical round housing.

The white display with red indicator records either speed or tachometer data. All further values are shown in the digital display.

Modern digital technique, high grade materials, hand made production and intensive quality checks guarantee highest optical and functional quality – Made in Germany.
